Global Health Watch 5
An Alternative World Health Report

GHW5 is the latest edition of what remains the leading source for radical analysis in global and development healthcare.

For over a decade, Global Health Watch has been the definitive source for alternative analysis on health and healthcare, challenging conventional wisdom and pioneering innovative new approaches to the field. This new edition addresses the key challenges facing governments and health practitioners today, within the context of the UN’s Sustainable Development Goals.

Collaboratively written by academics and activists drawn from a variety of movements, research institutions, and civil society groups, its case studies cover some of the most pressing issues in world health, from the resurgence of epidemic diseases such as Ebola to antimicrobial resistance, climate change, and the ‘war on drugs’. Combining rigorous analysis with practical policy suggestions, Global Health Watch 5 offers an accessible and compelling case for a radical new approach to healthcare across the world.
